Finding Missing Sides

Today's Objective

SWBAT use trigonometric ratios for acute angles in right triangles to find missing side lengths.

The ratios of the side lengths of a right triangle depend on the measure of its acute angles. These are called _____.

$$\text{Sine of } \angle A (\sin A) = \frac{\text{O}}{\text{H}} = \frac{a}{c}$$

$$\text{Cosine of } \angle A (\cos A) = \frac{\text{A}}{\text{H}} = \frac{b}{c}$$

$$\text{Tangent of } \angle A (\tan A) = \frac{\text{O}}{\text{A}} = \frac{a}{b}$$

Thinking “_____ - _____ - _____” can help you remember these ratios. Using these ratios, you can find the length of any side of a right triangle if you know one acute angle and any other side.

Example 1

Use a trigonometric ratio to find the value of x in the diagram. Round your answer to the nearest tenth.

Check for Understanding

Use a trigonometric ratio to find the value of x in each diagram. Round your answer to the nearest tenth.

Guided Practice

Use a trigonometric ratio to find the value of x in each diagram. Round your answer to the nearest tenth.

1.

2.

3.

Example 2

Find the height and length of the base of the ramp shown. Round your answer to the nearest tenth.

Check for Understanding

In example 3 above, suppose the length of the ramp is 18 feet. Find the height and length of the base of the ramp. Round your answer to the nearest tenth.

Guided Practice

Use a trigonometric ratio to find the variables in each diagram. Round your answer to the nearest tenth.

1.

2.

3.

Independent Practice

1. Use a trigonometric ratio to find the value of x in the diagram. Round your answer to the nearest tenth.

2. Use a trigonometric ratio to find each variable in the diagram. Round your answer to the nearest tenth.

Home Work

Use a trigonometric ratio to find the value of x in the diagram. Round your answer to the nearest tenth.

Home Work

5. Find the height of the lamppost to the nearest inch.

6. Use a trigonometric ratio to find the variable in each diagram. Round your answer to the nearest tenth.
